NOTICE OF SEWER SERVICE REPAIR

May 8, 2023

16 Elliot Street

You are receiving this notice because during the water main installation project last summer, your sewer service was encountered and repaired at the water main crossing with a small section of plastic (PVC) pipe. In Melrose, property owners own the sewer service that connects the sewer main in the street to your home, including the portion under the City's roadway.

Our records indicate that your sewer service material is Orangeburg pipe, which is a pipe made of ground wood fibers, and was installed in 1953. Over time, this pipe deteriorates and no longer functions properly.

The road is scheduled to be paved this construction season, and we recommend that you replace your sewer service, at least the portion from your property line to the sewer main in the street, so that you can avoid any potential sewer repairs after paving is completed. Once we pave a road, the City institutes a 5-year construction moratorium, which means that only emergency service repairs will be allowed. Should you require a sewer repair during the moratorium, you will be responsible for full curb-to-curb pavement restoration. If you repair your service prior to paving, your contractor will only be required to finish with a temporary paving patch, which will be less costly.

Please note, it is not required to replace your sewer service. This notice just serves as a recommendation from the Department of Public Works Engineering Division.

If you have questions or concerns, please call the Melrose DPW Engineering Division at 781-979-4172.
